

MSeis® PAM Training Courses

Training for work offshore

MSeis offer comprehensive training in the use of Night Hawk PAM systems & Pamguard software. Courses typically consist of two sessions classroom based or online remotely.

The course introduces PAM, details of the hardware and software used in the MSeis Night Hawk PAM system and explains the worldwide applications and a mitigation and monitoring tool.

Our instructors have a wealth of field experience and can prepare the candidate for realistic working scenarios offshore. Tailored and refresher sessions are also available on request for the more experienced PAM operator.

Groups are of up to 6 people per session, however larger groups can be accommodated upon request. MSeis also offer on-site training where this is a more practical solution.

Course Structure

Session 1

- Introduction to PAM presentation
- Low Frequency Hardware
- 2 Channel Low Frequency
- GPS and RS232 Hardware
- Mapping modules

Session 2

- Deployment and Operations
- 4 Channel LF
- Depth Transducer Hardware
- Sensors and Detectors
- High Frequency Hardware
- High Frequency Setup
- Dual High Frequency Hardware
- Dual High Frequency Setup
