

Quality Policy

MSeis design, develop, manufacture and provide PAM (Passive Acoustic Monitoring) cetacean listening devices to the offshore industry and are committed to being the preferred provider in this sector.

To this end we have implemented and will maintain and continually improve a quality management system (QMS) in accordance with the requirements of BS EN ISO 9001:2015 and appropriate to our purpose, context and strategic direction.

MSeis will:

- Determine the requirements of our market, customers and other interested parties, and evaluate the related risks and opportunities
- Maintain the processes necessary to remain compliant with applicable requirements including legal requirements and those of our customers, and continually improve our ability to do so
- Provide all the resources of equipment, trained and competent staff and any other requirements necessary for the effective implementation, maintenance and continual improvement of the QMS
- Ensure that all employees are aware of this policy and applicable QMS requirements
- Establish quality objectives and communicate them throughout the organisation

The Quality Policy and Objectives, together with the extent to which they have been met and the effectiveness of the QMS will be reviewed by management on a six-monthly basis.
